Speed is advantage.

Microseconds matter. As high-velocity trading expands globally, few firms will have the resources to maintain long-term relationships with multiple co-location facilities globally. Few will be able to build out international long-haul circuits to interconnect into one high-speed network. Finding the fastest path to a market, planning for microbursts, maintaining an infrastructure edge, reducing total cost of ownership — that’s what we deliver, because that’s what you demand.

For managed, ultra-low latency IT and market data services for electronic trading, realize your possibilities with Interactive Data.
